Re : Swab Study

Dear Jasmine,

Five (5) selected bins were swabbed and tested for Total Plate Count, Coliforms and *Escherichia coli* on Day 0, 7, 14, 22 and 30.

On Day 7, 14 and 22, the swabs were taken at the pre-determined clientele locations; swabs on Day 0 and 30 were taken at the premises of Sanicare Hygiene.

The respective test reports corresponding to the sampling dates are as follows:

<u>Sampling Date</u>	<u>ALS Test Report</u>
4 December 2006 (Day 0)	ATHQ/4441/2006
12 December 2006 (Day 7)	ATHQ/45792/2006
18 December 2006 (Day 14)	ATHQ/47000/2006
26 December 2006 (Day 22)	ATHQ/48006/2006
4 January 2007 (Day 30)	ATHQ/00242/2007

Based solely on the results obtained, there was no significant increase of Total Plate Counts; even at Day 30, Total Plate Counts were all below 15 cfu/cm². Coliforms and *Escherichia coli* were not detected throughout the study.

Thank you.

Yours faithfully,

.....
Melinda Kong
